Git
MySQL
Docker

EXPERIENCE

Full Stack Developer

FinXp | August 2022 - present

My job as a Full Stack developer at FinXp is to implement web application designs, functionalities and API structures. Implementing new features and fixing bugs are my primary responsibilities.

Full Stack Developer

Unexus Inc. | Part time

I was hired in Unexus Inc. to build a Specimen Tracking application from scratch, provide support for fixing issues and implementing new features for existing application of the company.

Transcriptionist

TaskUs | February 2021- January 2022

Call Center Agent

Dynata | July 2020 - November 2020

INTERNSHIP

FinXp|August 2022 – November 2022

Participated in web application and API projects by implementing new API structure, features and fixing several bugs mostly in API built in Laravel.

PROJECTS INVOLVEMENT

Apply Corporate
Languages used: React/Typescript and Laravel

Implemented forgot and reset password functionality for Keycloak users.

Implemented document uploads and downloads for several required documents for client.

Refactoring the application data flow structure in Front end by creating reusable components and functions to fix complex bugs and maintain code smells free codes.

Implemented the core User Stories with accordance from the documentation provided by the Business Analyst.

Successfully finished the project with the team and removed all bugs before going live.

Business Onboarding API
Language used: Laravel

Participated on implementing some major user stories based on the API requirements.

Fixed bugs and gave technical solution for solving problems. Help teammates by simplifying code structure to avoid potential system issues.

Successfully implemented unit testing for every assigned task.

Participated in doing stress-test using Postman after user stories and bugs are marked to done in Jira.

Creditor Identifier Feature in Portal Admin Application
Language used: Angular and Laravel

Creditor Identifier is a form of fields that asks for client's credentials, including ID numbers etc, to do some technical computation in the background while submitting the form. I have implemented it to be part of Portal Admin in FinXp for existing clients so that they don't have to use another app just to compute their identifier and we can have it in our own database.

Onboarding App
Language used: Angular and Laravel

Successfully finished the Onboarding App as a first assessment task from FinXp. It is a simple app that consist of multiple forms from different components with different fields. It was made using Angular and Laravel.

Award

"Mission Impossible Award" by FinXp Team.

Received: November 25, 2023

I hereby declare that all the information above are correct with accordance to the best of my knowledge and belief.
